

Professional Website Bug Fix Portfolio

I help businesses fix broken website layouts, forms, CSS, JavaScript, responsive issues, WordPress problems, custom code bugs, APIs, databases and backend functionality.

Core promise

Fast communication, clean code, careful testing, and reliable delivery.

CSS

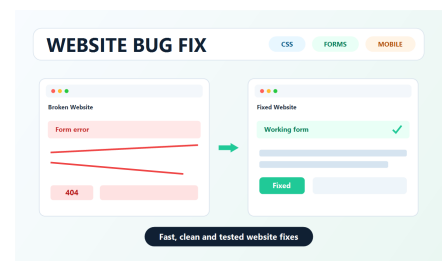

Forms

Mobile

WordPress

React

Laravel

Common Website Issues I Can Solve

This gig is designed for buyers who already have a website but something is broken, misaligned, slow, unresponsive, or not working as expected.

Layout and CSS

Spacing, alignment, overlapping sections, styling bugs and broken visual design.

Forms and Buttons

Contact forms, booking forms, validation, submit errors and button actions.

Responsive Issues

Mobile, tablet and desktop layout problems across modern browsers.

JavaScript Bugs

Menus, sliders, popups, errors, dynamic UI and frontend behavior fixes.

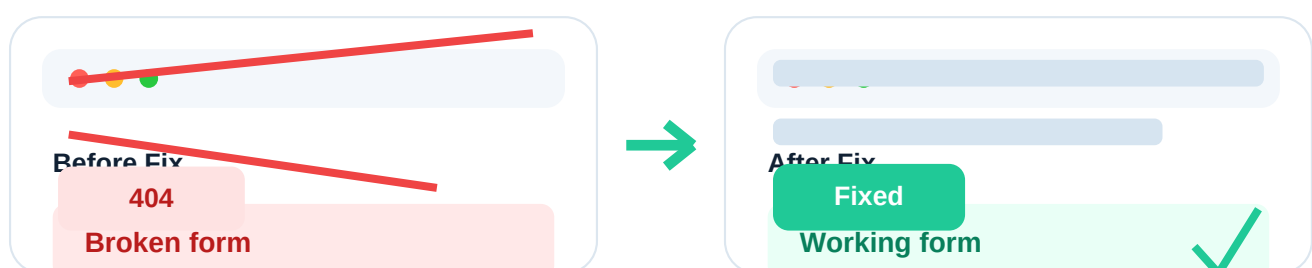

WordPress Fixes

Elementor, WooCommerce, themes, plugin conflicts and admin-side issues.

Custom Code

React, Next.js, Node.js, PHP, Laravel, API, database and backend bugs.

Example before and after

Technologies I Work With

I can handle both frontend and backend issues, so you do not need multiple sellers for one

Fix Frontend & Backend Issues

HTML, CSS, JavaScript, React, Next.js, Node.js, PHP, Laravel, WordPress and databases

```
const issue = findBug(site);  
fix(forms, layout, css);  
test(mobile, desktop);  
deploy(cleanCode);
```

HTML CSS JavaScript

React Next.js Node.js

PHP Laravel WordPress

Database API Fix Responsive

Clean code. Tested delivery.

Frontend

HTML

CSS

JavaScript

jQuery

React

Next.js

Backend

Node.js

PHP

Laravel

Databases

APIs

Server-side bugs

CMS and Stores

WordPress

Elementor

WooCommerce

Themes

Plugins

Forms

Best fit: broken pages, mobile issues, form problems, WordPress fixes, custom-code bugs, API errors, and small-to-medium frontend/backend repairs.

How I Work On Your Website Issue

A clear process keeps the order smooth and helps me fix the real problem without unnecessary changes to your website.

1

Review the Issue

I check your website URL, screenshots, error messages and access requirements.

2

Confirm the Scope

I identify whether the problem is frontend, backend, WordPress, database, API or hosting related.

3

Fix Carefully

I repair the issue using clean code and avoid changing unrelated parts of your website.

4

Test Before Delivery

I test the fix on desktop/mobile and confirm the expected result before delivery.

Buyer Requirements

- Website URL and exact page with the issue
- Screenshot, screen recording or error message if available
- Expected result after the fix
- Admin, hosting, FTP, GitHub or source code access if needed

Ready to fix your website issue? Please message me before ordering.
